Custom Steel Spiral Staircase with Center Support

Product Specification Schedule

Stair configuration	Custom center-support steel spiral staircase; radial treads, upper landing and railing included to the agreed component schedule.
Package selection	Custom steel center-support spiral staircase with scheduled treads, upper landing and railing; dimensions, connections, surface treatment and supplied components defined for the project.
Finished height	Lower finished floor to upper finished floor in mm, including both floor build-ups; intermediate structural levels recorded separately.
Plan geometry	Overall stair diameter, actual floor-opening shape and dimensions, rotation, lower entry and upper exit positions recorded in mm and on plan.
Tread and railing detail	Tread count and outline, riser arrangement, walking-line dimensions, headroom, handrail and guard requirements resolved for the project.
Steel and surface	Steel grade, member sections, tread surface, finish system and connection details specified on the project schedule; no stock section or coating assumed.
Supports and supply	Column base, landing support, structural fixing interfaces, component quantities, packing and installation responsibilities itemized; project engineering and local acceptance separate.

Steel spiral stair package

Center-support steel spiral: Custom steel center-support spiral staircase with scheduled treads, upper landing and railing; dimensions, connections, surface treatment and supplied components defined for the project.

Steel Spiral Stair Components & Separate Building Work

Steel stair assembly: Scheduled center support, radial treads, landing, handrail and railing infill, with quantities and assembly divisions identified.

Geometry and finish: Project drawing dimensions, rotation and entry/exit positions; selected steel, tread surface and finish reference.

Connections and guards: Agreed connection parts, mounting plates and any additional opening guard itemized; structural supports and anchor selection coordinated separately.

Shipment and site work: Protected packing and destination-based freight; unloading, lifting, building preparation, installation and local approval assigned separately.
